

Virtual Plankton Ecology

Volume 1 Principles

Contents

Science & Technology

Chapter 1	Principles of Virtual Plankton Ecology
Chapter 2	Agent-based modelling
Chapter 3	Forcing - weather, circulation, resources, events, top predators
Chapter 4	Physical environment
Chapter 5	Chemical environment
Chapter 6	Plankton
Chapter 7	Virtual Ecology Workbench
Chapter 8	Numerical experiments
Chapter 9	Comparison with observations

The Practice of Virtual Plankton Ecology

Chapter 10	A virtual ecosystem - LERM at the Azores
Chapter 11	Stability and predictability
Chapter 12	Geographically-Lagrangian experiments

Appendices

Appendix 1	References
Appendix 2	Endnotes
Appendix 3	Glossary
Appendix 4	History
Appendix 5	Acknowledgements

DVD	VEW4, technical manuals, exogenous data Azores virtual plankton ecosystem
------------	--

Virtual Plankton Ecology

Volume 2 Paradigms

Twelve Paradigms in Biological Oceanography

Introduction

Paradigm 1 Winter production

Paradigm 2 Spring bloom

Paradigm 3 Summer oligotrophy

Paradigm 4 Deep chlorophyll maximum

Paradigm 5 Natural selection (prognostic biodiversity)

Paradigm 6 Seasonal succession

Paradigm 7 New and regenerated production – f-ratio

Paradigm 8 Trophic cascade

Paradigm 9 Plankton diseases

Paradigm 10 Permanent oligotrophy

Paradigm 11 BATS simulation

Paradigm 12 CPR copepods

Virtual Plankton Ecology

Volume 3 Applications

Contents

Operational Oceanography

- | | |
|-----------|-----------------------------------|
| Chapter 1 | Introduction |
| Chapter 2 | Climate - the Plankton Multiplier |
| Chapter 3 | Fisheries recruitment |
| Chapter 4 | Toxic algal blooms |
| Chapter 5 | Bio-transport of pollution |
| Chapter 6 | Alien species |

The future of Virtual Plankton Ecology

- | | |
|------------|---|
| Chapter 7 | Three-dimensional Virtual Plankton Ecosystems |
| Chapter 8 | Biological oceanography: Calibrating bottle incubations |
| Chapter 9 | Marine biology: Laboratory mesocosms |
| Chapter 10 | Plankton Ecology as an experimental science |
